

Braking System

We guarantee all of our parts, you can be confident that our premium products and workmanship of our brake repairs will provide the maximum kilometers from your braking system.

Warning Signs

If you are experiencing any of the following driving symptoms, it could indicate a problem with your brakes. It's time for a brake service if...

It's time you visited us if:

- You can hear squealing , grinding noise when you brake.
- Your vehicle is pulling to one side.
- Your steering wheel feels like it's shaking.

Your brakes are not able to be legally tested in a thorough manner during a routine [WOF](#) inspection. As the wheels are not removed, it is only the time it takes for your car to stop that is tested.

For Total Safety it is vital that any brake repairs be carried out straight away, with any worn or faulty brake components quickly repaired or replaced.

How we help

Come in we can check for:

- Splits in brake hoses
- Corroded brake pipes, connections
- Fluid Leaks in the sealed system

We will measure moisture content in the brake fluid , recommended change intervals are every 2 – 3 years .

Cheaper Brake Pads can be noisy , prone to squealing, limited wear life.

Constant braking can cause your brake fluid to boil and thin out.

This is called Brake Fade, brake pedal pressure is limited changing needs to happen soon as possible.

Helpful Tips

Brake Fluid is hygroscopic absorbs water once it enters your system it can rust everything. Another important reason to have it regularly replaced.

We recommend a service and replacement of fluid every 2 - 3 years.
